

Brick Tavern provides Easi-Set building to house ball park electrical panels

Brick Tavern Concrete Products of Hudson, N.Y., recently provided a 10-foot by 12-foot Easi-Set fully assembled precast concrete equipment building to the Roosevelt Field Ball Park on Oyster Bay, Long Island. The building will be used to house the electrical equipment for the little league ball park lighting.

Brick Tavern (bricktavernconcrete.com) manufactured the pitched roof, brick finish building at their Hudson facility where they recently completed a 10,000-square-foot manufacturing facility dedicated to the production of Easi-Set precast concrete buildings. The patented, post-tensioned building system provides even greater weather-tightness and impact resistance for the precast roof and floors. Easi-Set Buildings (easiset.com) are installed in a day, require no foundation and are relocatable.

According to Tim Cantele, who owns Brick Tavern with his wife Diane, Easi-Set buildings have numerous advantages over conventional constructional materials. Because the entire building is constructed from precast concrete panels, the maintenance and operating costs over its 75- to 100-year life will be extremely low, not to mention the fact the walls are made from foam filled sandwich panels which carry an R-26 energy rating.” The production on the Oyster Bay building began in May with delivery in late June.

Brick Tavern is a family owned concrete products company that has been doing business in Hudson for more than 25 years.
